

The Balance Clinic at

Hearing Balance & Speech Institute

Our balance clinic is a state-of-the-art facility for gently assessing vertigo (dizziness) and balance problems. According to the National Institute of Health, 85% of all equilibrium problems can be directly related to an inner ear disorder. Research clearly shows that with early evaluation and treatment, many common causes of dizziness can be easily treated.

An Audio-Vestibular Evaluation includes a comprehensive assessment of your hearing and vestibular systems in a warm and caring environment.

MS, CCC, A/SLP, FAAA
Audiologist/Speech Pathologist

Patient Self Quiz for Dizziness & Balance Problems*

Have you ever felt?

- A feeling of motion, spinning, or falling when moving your head quickly, or changing your position?
- Uncomfortable trying to get around in the dark?
- Walking down the grocery store aisles or through the mall is upsetting?
- Your feet just won't go where you want them to?
- A sense of unsteadiness? A feeling you are not sure-footed?
- A fear of falling or stumbling?
- Looking at moving objects such as escalators or looking out the side window of a car makes you queasy?
- Difficulty keeping your balance as you walk on different surfaces? (e.g. tile to carpet)
- A feeling like you are drifting or being pulled to one side when walking?
- No one really understands how frustrating this can be?

If you have answered YES to one or more of these questions, a vestibular and equilibrium evaluation should be considered.
